Measures Used

2 x 2 Contingency Table

Observations \ Forecasts			
	A	B	C = A +B
	D	E	F = D + E
	G = A + D	H = B + E	I = C + F

- **Chi-Square** – used to test for statistical significance. Answers the question, “Do we have a large enough sample to know our results are conclusive?”.
- **Heidke Skill Score** – used to test whether we are beating persistence or climatology.
- **Bias** – used to determine whether we are over-forecasting or under-forecasting.

Review

- HWD – Overall a good month with a Strong-Moderate skill. Tendency to over forecast which was often due to ceiling heights of 030-035 vs. not having MVFR.

- TSTMS – Overall strong skill with a tendency to over forecast yet lower than last month. Expect stats to be lower next month due to decreased opportunities.
